

Ver.1.1 Change in text size* after translation from English

Size of translated text = size of English source x k

* These data are based on our practice and desktop publishing experience. Size refers to the space that text occupies on the printed or digital page and does not refer to the number of characters. To determine size increases and decreases, we took into account differences in the number of characters between source and target languages as well as differences in typography, including line spacing and the size and spacing of characters
